

```
// fetch POST
```

```
fetch('http://api-to-call.com/endpoint', {  
  method: 'POST',  
  body: JSON.stringify({id: '200'})
```

— sends request

```
}).then(response => {
```

```
  if (response.ok) {  
    return response.json();  
  }
```

— converts response
object to JSON

```
    throw new Error('Request failed!');
```

```
  }, networkError => console.log(networkError.message)
```

— handles errors

```
  ).then(jsonResponse => {
```

```
    // Code to execute with jsonResponse
```

```
  });
```

— handles success
