

```
// async await GET

async function getData() {
  try {
    let response = await fetch('https://api-to-call.com/endpoint'); // sends request
    if (response.ok) {
      let jsonResponse = await response.json();
      // Code to execute with jsonResponse
    }
    throw new Error('Request Failed!');
  } catch (error) {
    console.log(error);
  }
}
```

handles response if successful

handles response if unsuccessful
