```
// XMLHttpRequest GET
                              creates new object

const xhr = new XMLHttpRequest();

const url = 'http://api-to-call.com/endpoint';

xhr.responseType = 'json';

xhr.onreadystatechange = function () {

  if (xhr.readyState === XMLHttpRequest.DONE) {

      // Code to execute with response          handles response

    }

};

xhr.open('GET', url);

xhr.send();                              opens  request and sends object
```
